How the Internet Works

What's the Problem?

How the Internet is Surveilled

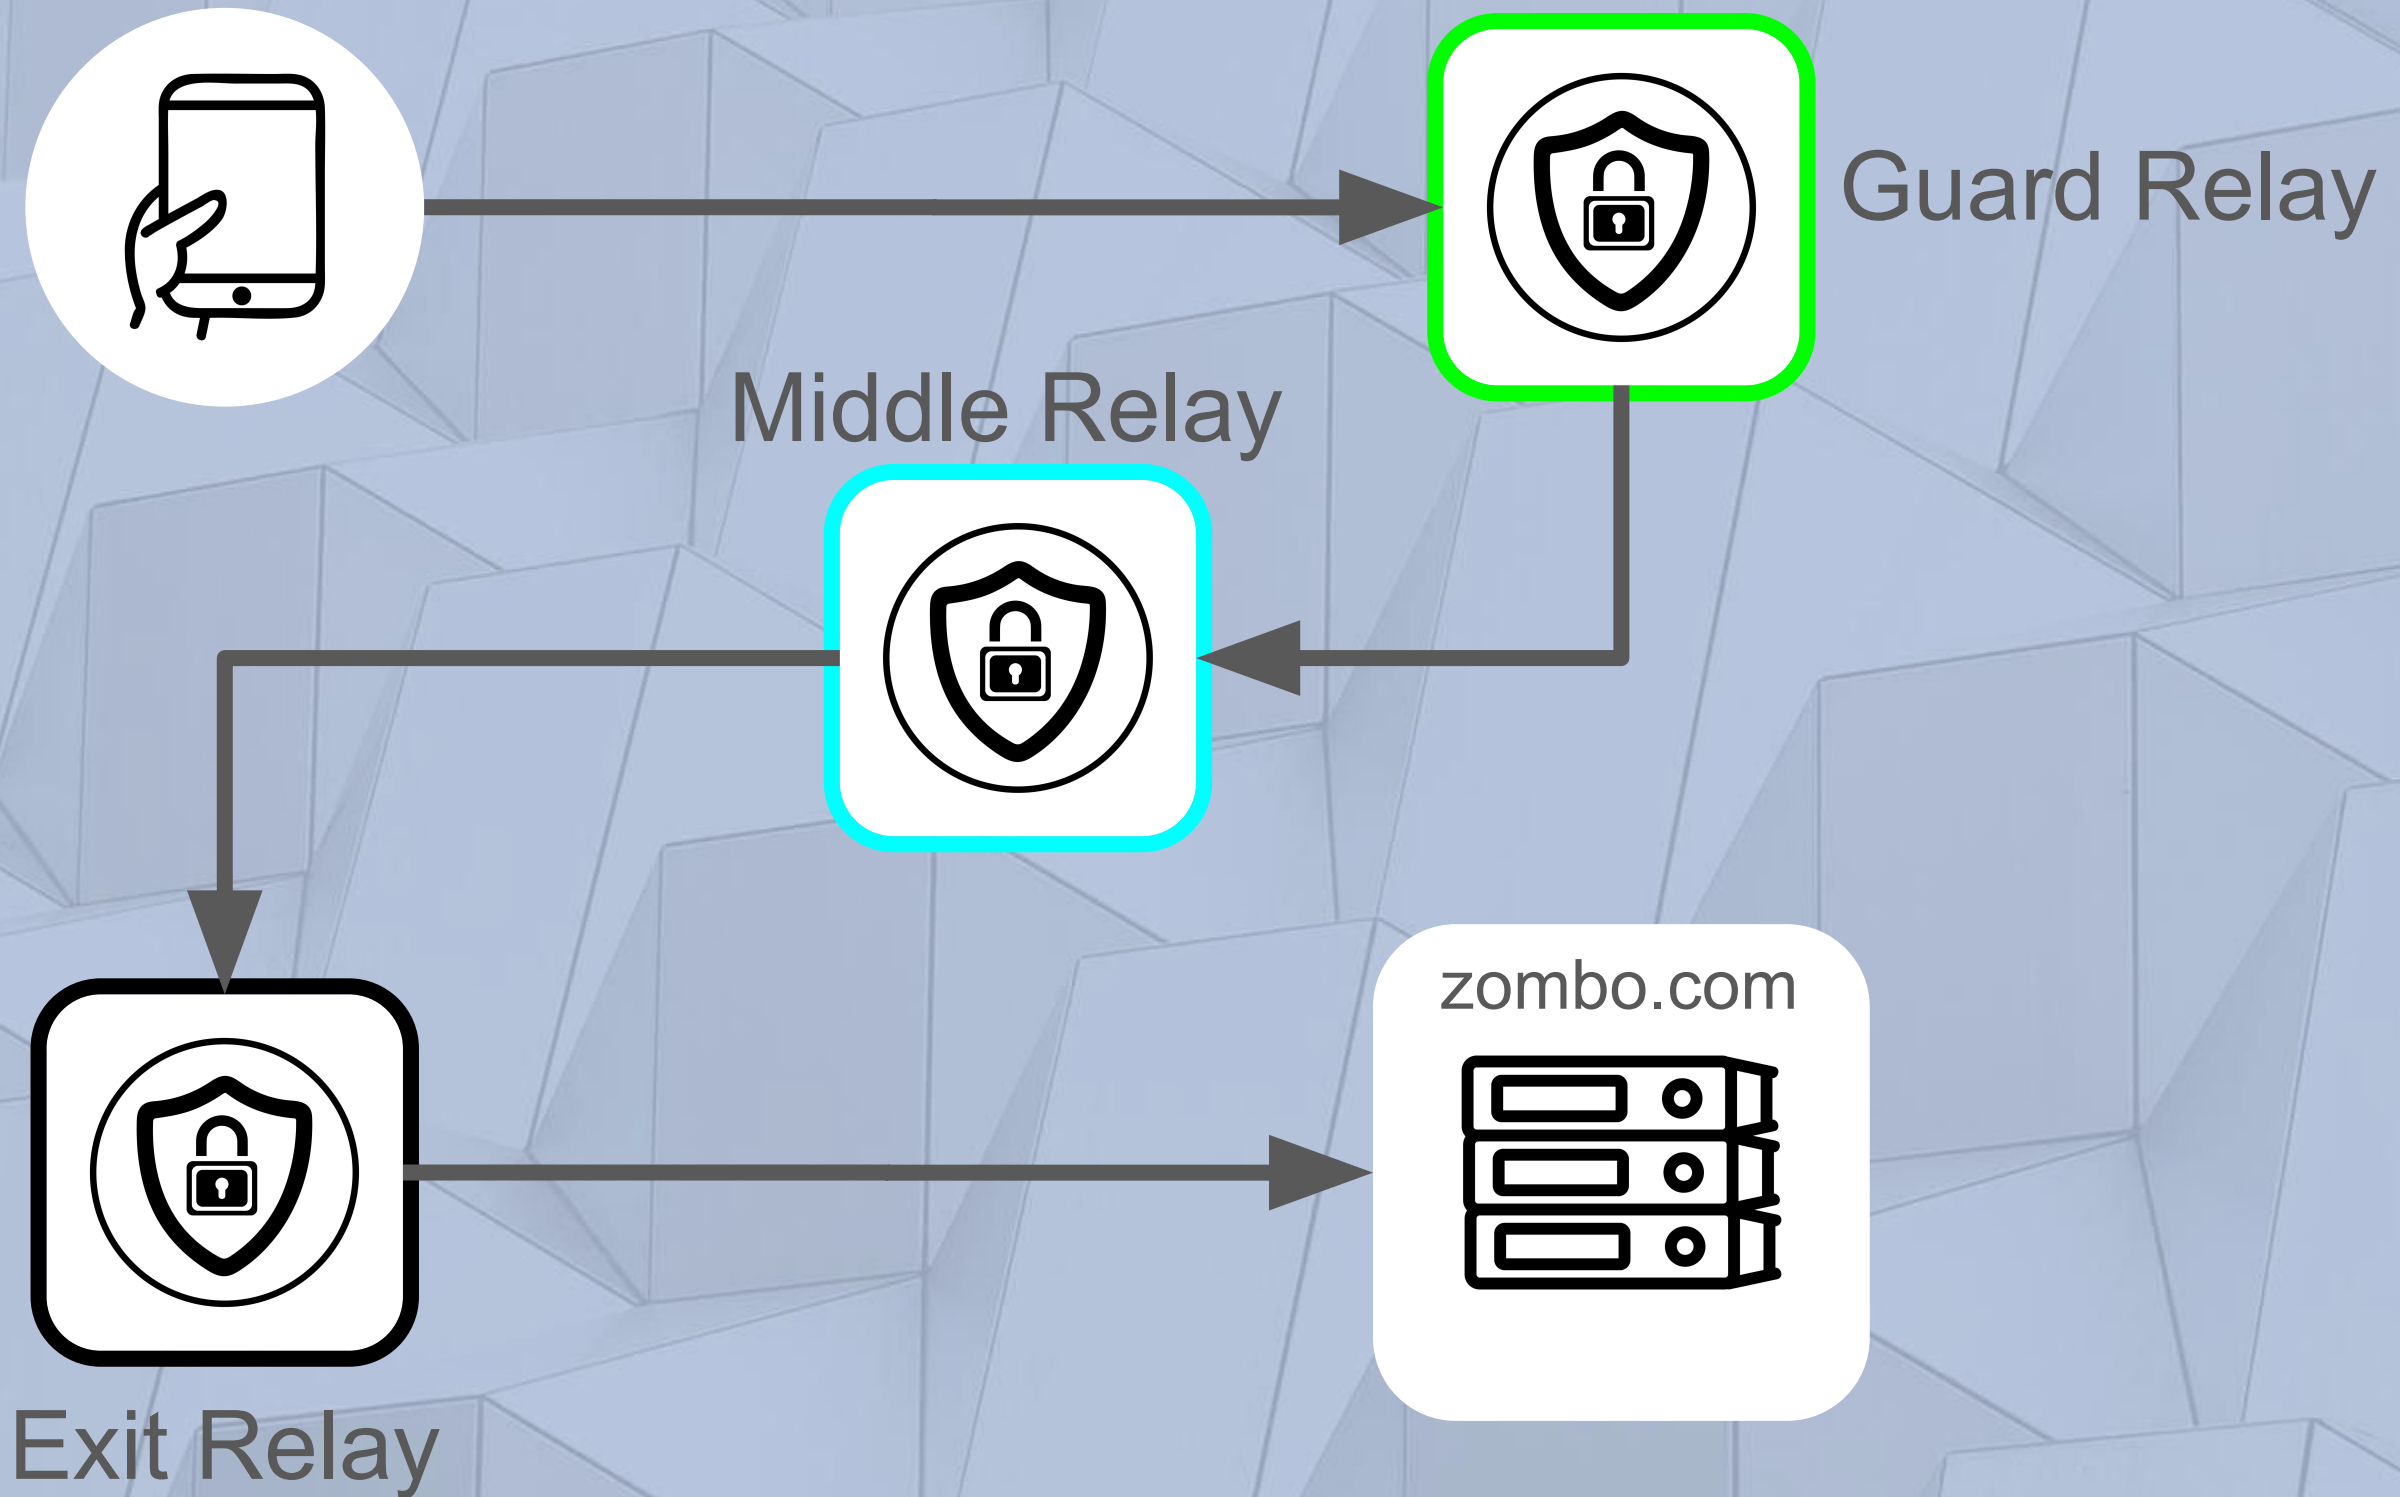

The 30-year-old internet backdoor law that came back to bite

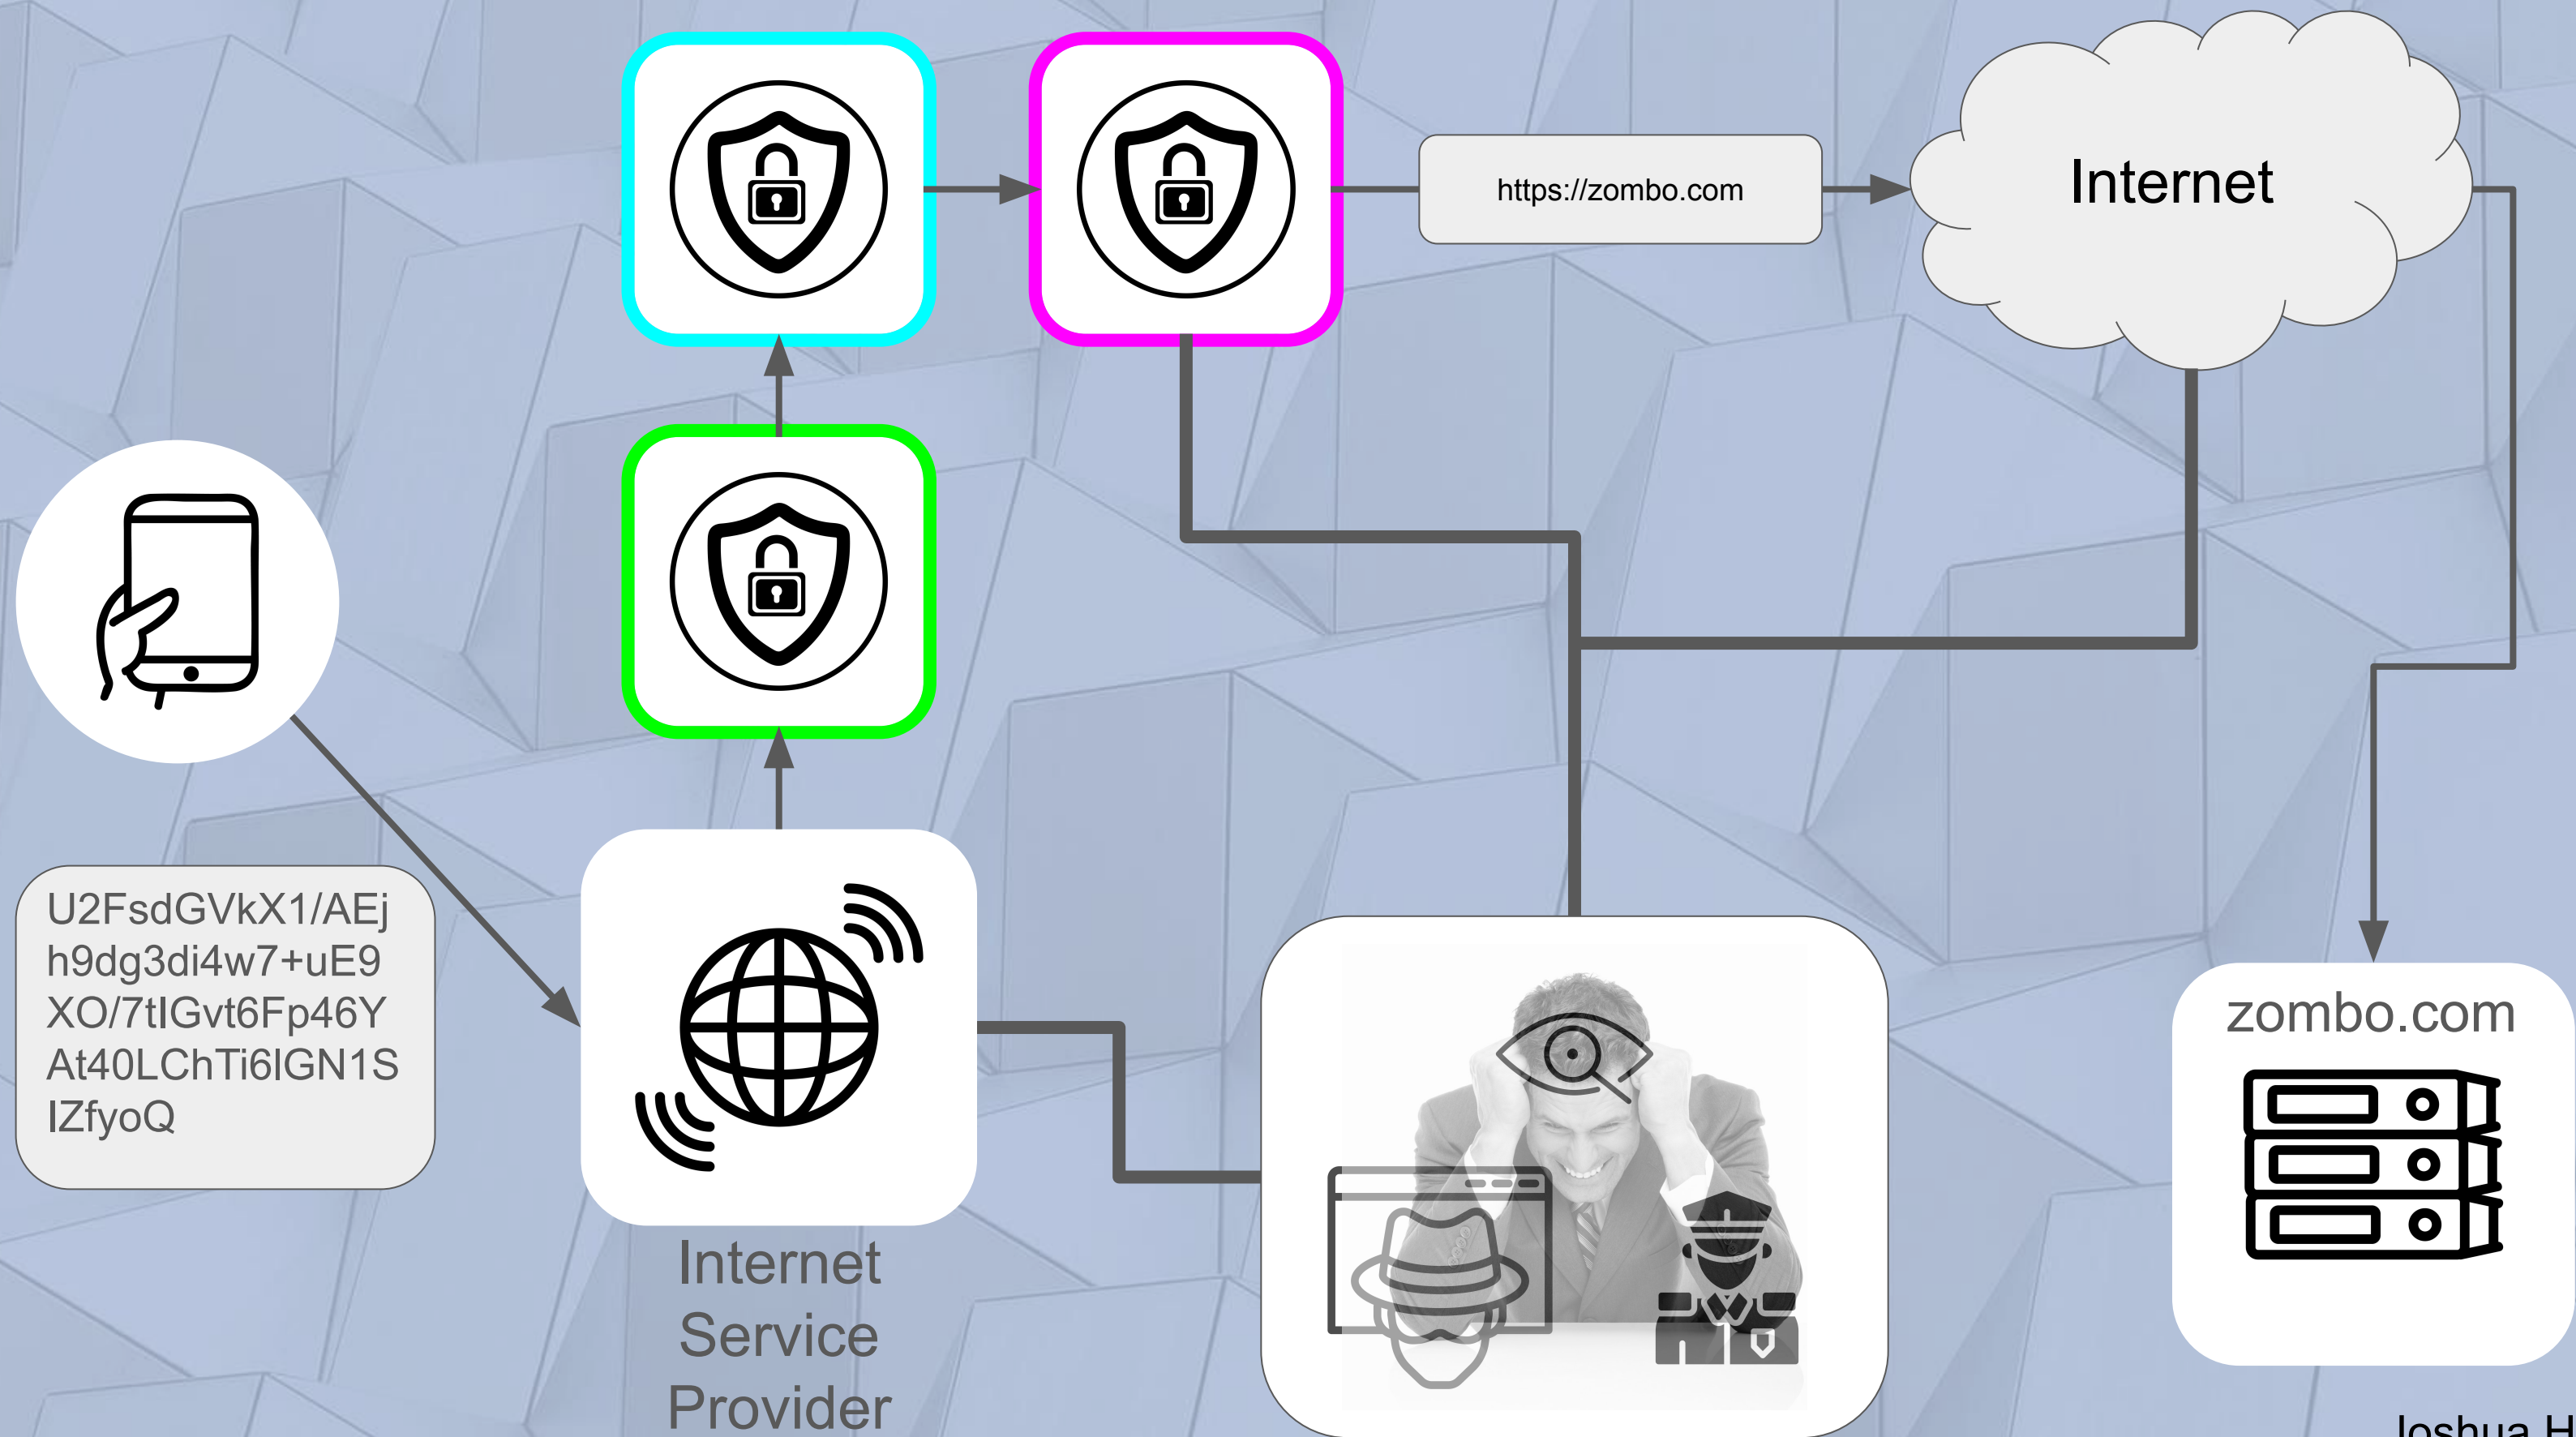

News broke this weekend that China-backed hackers have compromised the wiretap systems of several U.S. telecom and internet providers, likely in an effort to gather intelligence on Americans.

The wiretap systems, as mandated under a 30-year-old U.S. federal law, are some of the most sensitive in a telecom or internet provider's network, typically granting a select few employees nearly unfettered access to information about their customers, including their internet traffic and browsing histories.
